## **Format D0CMF**

D0CMF (defined from *Dušan's "Zero" Caret Matrix Format*) is a text format to storing matrix or the data with matrix or number array character.

Enconding: More zeros are replacing by char caret and then the count of the zeros, example  $0 0 0 \rightarrow 3$ .

## **Example**

## **Original data**

- 1 0 0
- 0 2 3
- 0 0 7

#### **D0CMF**

- 1 ^2
- 0 2 3
- ^2 7

### Characteristic

- Text format.
- Line format.
- The data are only in the one block stream.
- User-like reading format.
- To save the face of the real data/matrix.
- Simple decoder for the export into RAW original matric.

# **Testing**

"Random" generated square matrices (source /dev/random) were used as input and tested in text and binary representation. In binary representation, the constant size of data value is 2B and offsets value is 3B; storing in little endian.

## **Summary**

When testing random square matrices of order 10, 20, ..., 320 with non-zero element density of 0.1%, 1%, 5%, 10%, 20%, 30% and 40% and comparing with LIL, DOK, COO, CSR and CSC formats in text and binary storage (averages from 1000 individual tests), we can characterize the D0CMF format, in terms of the smallest stored size, as being an intermediate format between full-matrix storage and other formats.

The D0CMF format is suitable (compared to other formats) for:

| Size           | RA    | W      | Compression |        |  |  |  |
|----------------|-------|--------|-------------|--------|--|--|--|
| Representation | Text  | Binary | Text        | Binary |  |  |  |
| NZ density     | Order |        |             |        |  |  |  |
| 1%-            | None  |        |             |        |  |  |  |
| 5%             | 290+  | None   | 110+        | 120+   |  |  |  |
| 10%            | 130+  | None   | 60+         | 60+    |  |  |  |
| 20%            | 30+   | None   | 40+         | 30+    |  |  |  |
| 30%            | 20+   | 20+    | 30+         | 20+    |  |  |  |
| 40%            | All   | All    | 30+         | 20+    |  |  |  |
